

Toronto, CA

Are you passionate about transforming healthcare through technology? Do you want to modernize Canadian healthcare and make a lasting impact for clinicians, caregivers, and patients alike?

MedMe is a novel pharmaceutical care platform that optimizes value and access to modern, personalized pharmacare. MedMe's out-of-the-box SaaS pharmacy solution uses analytics, machine learning, and user-centered design to empower patients and their circle of care.

Product Development Intern

At MedMe, the software you'll build will eliminate antiquated pharmacy processes, and allow for more time for patient-centered care. For patients, MedMe will empower them with right information at the right time, along with the tools, resources, and connection to their clinicians and caregivers to ensure their best possible health outcomes.

We're looking for a Product Development Intern with entrepreneurial spirit and a passion for making an impact. We are continually looking at new ideas and technology to build on the foundations of our SaaS platform. You'll work closely with pharmacy clients, patients, and the team to help develop and test these user-centric, data-driven solutions. We're looking for someone who wants to work on an open and transparent team that encourages learning and discussion as you contribute to our culture and help build the future of MedMe. Full-time opportunities with share options are available after a successful summer with us.

What You Will Do

- Assist the team in agile development of the MedMe platform
- Perform testing and iteration of MedMe platform through implementation at pilot pharmacies
- Investigate needs for various stakeholder groups (i.e. pharmacists, patients, doctors) and new features to improve the user experience
- Participate in regular iteration meetings
- Learn, have fun, and put your best foot forward as part of the MedMe team

Who You Are

- Undergraduate-level degree in Computer Science, Engineering, Health Informatics, or related field in-progress
- Experience with programming (don't sweat the language, tell us what you know!)
- Demonstrated ability effectively communicate and work well with others
- Motivated to learn about the healthcare industry and make an impact through technology
- Strong entrepreneurial drive to be a part an industry-disrupting start-up team
- *Nice to have:*
 - Experience with UI/UX design/testing
 - Experience with agile development
 - Knowledge/experience of the healthcare industry
